

WheelTrackSM manages wheel detector data

reduce wheel maintenance costs and extend wheel life

WheelTrackSM incorporates all of your detector data in one place for easy analysis and management.

- Improve your ability to proactively manage maintenance and minimize repair costs on wheels
- Reduce costly AAR wheel changes and avoid potential wheel repair premiums
- Extend the life of your wheels
- Find and eliminate potential safety problems early

WheelTrackSM provides:

- Automatic daily imports of all kips readings from InteRRIS
- Import maintenance advisory data – eliminate reliance on e-mail notifications
- Easily view and manage open AAR “windows”
- Create alerts to identify cars with wheels meeting custom criteria
- E-mail alerts to others
- Easy to use, interactive reports and trend graphs allow quick analysis of the data
- Drill down capability to get the details
- A complete, easily accessible on-line history of kips readings on each of your railcars with ad hoc reporting capability for easy analysis

WheelTrack is an Internet application so there is no software to buy, maintain or upgrade and no IT support is required
